## LA ROCK MINING CORP.

[LAR-V] 15,049,397 SHS.

STEP-OUT HOLES INTERSECTS GOLD - Dr. Robert E. Lee, president reports La Rock Mining Corp. has received assay values from hole DP95-20 and DP95-21, on its 100%-owned, subject to 0.5% NSR, Brandywine gold property, 30 miles north of Squamish, B.C.

DP95-20 (-90'), located 80 feet south of hole 95-19 - This hole was drilled for geological purposes to test the outer perimeter of the DP mineralized zone and to test the black volcanic dyke unit. As expected, anomalous gold values were obtained and a surprisingly good bonus of 3 feet of 2.43 oz. silver/ton.

DP95-21 (-90') is located 120 feet east of hole 95-6 which returned excellent gold assay values. The geology encountered in sections in hole 95-21 is very similar to the gold-bearing, brecciated zones found in holes 95-5, 6, 16, 17 and hole 95-19.

15 feet (wt. av.) of 0.722 oz. gold/ton.

INTERVAL FEET	WIDTH FEET	GOLD OZ/T
173-178	5	0.162
178-183	5	0.230
183-188	5	1.774
213-218	5	0.127

Mineralization is striking in a south-southeast direction, towards a large geochemical anomaly, 1,500 feet further to the south-southeast, previously identified by Noranda and Placer Dome. La Rock is preparing to drill this large geochemical anomaly soon. (SEE GCNL NO. 155, 14Aug95, P.1 FOR PREVIOUS BRANDYWINE PROJECT INFORMATION)
