ECSTALL MINING CORPORATION

[EAM-V] 4,403,000 SHS.

INMET MINING CORP.

[IMN-T] 81,207,383 SHS.

AKIE PROJECT DRILLING UPDATE - Chris Graf, P.Eng., president,
Ecstall Mining Corp. and
partner Inmet Mining Corp., formerly Metall Mining, report
diamond drill hole A-95-16 has been completed to a depth of 741.3
metres (2,450 ft.) and successfully intersected the Akie deposit on
section 37+18 S at an elevation of 776 metres. The Akie project is
located in the Kechika Trough zinc district, 220 km southwest of
Fort Nelson, northeast B.C. Inmet can earn a 60% interest in the
Akie project from Ecstall. This hole was set up on section 38+00 S
to intersect the mineralization 325 metres down dip of previous hole
A-94-4. SEE DRILL HOLE MAP OVERLEAF P.3.

Drill hole A-95-16 intersected a 52-metre (200 ft.) true
thickness (from 601.5 to 662.2 m.) of massive and semi-massive
pyrite-sphalerite-galena mineralization interbedded with argil-
laceous sediments. This intersection is about twice as thick as the
thickest previous intersections of the Akie deposit which were 30.5
metres (100 ft.) in drill hole A-94-12 and 25 metres (82.5 ft.) in drill
hole A-95-13. Assays are pending.

This intersection in drill hole A-95-16 is 325 metres south and
225 metres down dip of the intersection in A-94-12 and 760 metres
south and 90 metres down dip of the intersection in A-95-13. The
diamond drill has been moved to section 34+00 S where drill hole A-
95-18 will be targeted to intersect the Akie deposit 425 metres
down dip of the previous intersection in A-94-12. Hole A-94-12 had
intersected the Akie deposit 300 metres down dip from surface. The
second diamond drill, drilling hole A-95-17 on section 24+00 S, is
presently at a depth of 200 metres. (SEE GCNL NO.154, 11Aug95.
