BOOKER GOLD EXPLORATIONS LTD.

[BGE-V] 5,822,023 SHS.

MORE HEARNE HILL ASSAYS REPORTED - Hugh Grenfal,
president,

reports Booker Gold Explorations Ltd. has received assay results from diamond drill hole 95-25 on its 100%-optioned Hearne Hill project 65 km east of Smithers, B.C. Exploration to date has been confirming the mineralization in an IP chargeability high resistivity low anomaly, which is one of six anomalies so far located in the central portion of the claims. A program to test the other five anomalies will begin in January. All of the high grade intercepts during the fall program have been within one target.

DDH 95-25 was drilled at a 64° angle, azimuth 200°. The hole averaged 0.25% copper, 1.27 grams silver/tonne and 0.10 grams gold/tonne over 1,147 feet. The notable intercepts are as follows:
88 FEET AVERAGING 0.56% COPPER, 2.20 GRAMS SILVER/TONNE, 0.19 GRAMS GOLD/TONNE
75 FEET AVERAGING 0.41% COPPER, 2.59 GRAMS SILVER/TONNE, 0.22 GRAMS GOLD/TONNE
OF WHICH END OF HOLE 0.70% COPPER, 3.0 GRAMS SILVER/TONNE, 0.38 GRAMS GOLD/TONNE

Exploration on the Hearne Hill project will continue through the winter with drilling to check the other IP targets, as well as delineating tonnage in the current target zone. (SEE GCNL NO.238, 12Dec95, P.1 FOR PREVIOUS PROJECT INFORMATION)
