**LRX CAPITAL CORP.**  
[LXC-V] 6,132,247 SHS.  
HIGH GRADE ASSAYS RETURNED - George Sanders, director, LRX  
Capital Corp., reports under-  
ground sampling of the Baker Vein system in the 100%-optioned.

subject to 2.5% NSR, Midnight Mine at Rossland, B.C. has confirmed the high grade nature of this historic gold producer. Channel sampling of the Baker system along 40 feet of drift in an area not previously mined produced the following results:

SAMPLE NO.	WIDTH FEET	GOLD OZ/T
1	5	0.315
2	3	0.265
3	10	1.320
4	3	1.011
5	8	2.362
6	2.5	5.013
7	6.5	0.299

The weighted average grade is 1.367 oz. gold/ton across 5.4 feet for a drift length of 40 feet. The samples were taken at regular intervals from the vein exposed in the back of the drift. This 40-foot section extends the Baker Vein along strike to the west. The vein has been mined for 200 feet along strike to the east and should extend a further 200 feet to the west. An underground diamond drill program is now underway to test the further western strike extension of this system as well as probing the vein up dip. Drilling will be followed by two raises into the zone and drifting on a sub level prior to bulk sample mining of the Baker vein. (SEE GCNL NO.13, 19Jan95, P.4 FOR PREVIOUS PROJECT INFORMATION)
