DALMATIAN RESOURCES LTD.

[DTN-V] 5,154,309 SHS.

CLAIM DISPUTE SETTLED - Frank Milakovich, president, reports Dalmatian Resources Ltd. now owns ground covered by the former Morning-Apex Crown grants. A section 35 claim dispute over prospective mineral ground formerly covered by the lapsed reverted Morning-Apex Crown granted mineral claims, 40 km west of Port Alberni, Vancouver Island, B.C., was decided in Mr. Leo Lindinger's favour by the Chief Gold Commissioner, Denis Lieutard. This means the Sunshine claim, staked and subsequently sold to Dalmatian, by Mr. Lindinger, is the true claim covering this ground. This claim is contiguous with Dalmatian's other property holdings. SEE MAP OVERLEAF P.1. The opposing party has, as of 16Dec94., about 30 days to dispute this decision in the Supreme Court of B.C.

The Sunshine Claim cover several gold-bearing quartz breccia veins with 105 years of mining exploration history resulting in several adits being driven on them. These veins are on strike with, and part of Dalmatians Tay vein system, together forming the Tay-Morning Fissure System, which contain gold-bearing veins over a known 2.5 km strike length. The Tay veins have a 1988 published reserve of 145,000 tonnes of 0.065 oz.gold/ton. More recent drilling in 1994 by Dalmatian discovered several more veins, including one containing visible gold reporting 420 grams gold/tonne (12.2 oz/ton) (uncut) over 0.08 metres (3 inches).

This acquisition adds to Dalmatian's current 35 square km contiguous land package. The Dalmatian property now has three known gold-bearing mineral occurrences and several gold and base metal prospects, including the Diane Zone where 18.2 grams gold/tonne in quartz-chalcopyrite breccia veining has been reported, and the recently staked Red Top Zone. The property remains largely unexplored with many mineral occurrences found only during last decade of logging activity. (SEE GCNL NO.153, 11Aug94, P.3 FOR PREVIOUS PROJECT INFORMATION)
