POOLEY ISLAND DRILL RESULTS - Larry W. Reaugh, president of Verdstone Gold Corp. and partner Amcorp Industries Inc. report results for the recently completed drilling and trenching on the 50/50 joint ventured Marion property, located on Pooley Island, central B.C. coast, about 210 km south of Prince Rupert.

WELL NO.	INTERVAL FEET	LENGTH FEET	COPPER %	GOLD PPM	SILVER OZ/T
#95-01	0-6.6	6.6	1.15	467	0.59
	29.5-62.3	32.8	0.60	157	0.15
#95-02	0-3.3	3.3	0.32	157	0.21
	26.2-55.8	29.6	0.48	89	0.26
T95-01 TRENCH	6.6-29.5	22.9	0.70	302	0.61
T95-02 TRENCH	3.3-13.1	9.8	1.45	436	0.91

This drilling tested a northwesterly trending banded calcite and

skarn zone in contact with a gneissic granodiorite. The banded limestone and skarn shows shallow dips in the drill holes with steeper dips in the trenches located 10 metres to the south. The drilling and the trenching outline two zones of skarn with significant copper and gold mineralization as evidenced by the assays. Testing for continuity and/or deeper mineralization was not possible with this pack sack diamond drill.

Additional claims were staked to the north to cover an additional one mile of favourable skarn contact zone discovered while working on the major showing.

The companies will conduct further drilling with a larger drill to test the continuity of this mineralization along strike and to depth. (SEE GCNL NO.90, 10May95, P.2 FOR PREVIOUS POOLEY PROJECT INFORMATION)
