BIG VALLEY RESOURCES INC. [BV-ALBERTA]

DRILLING CONTINUES ON MT. - Lloyd Tattersall, president of POLLEY NEIGHBOUR PROPERTY Big Valley Resources Inc.,

has reported assays from

two diamond drill holes on the Lloyd-Nordik property adjoining the Mt. Polley copper mine 50 miles east of Williams Lake, B.C.

Continued step-out drilling has outlined copper-gold mineralization in an east-west direction over a width of 1,120 feet. Drill hole 95-16 was collared 170 feet east of drill hole 94-4. Drill holes 95-14, 95-17 and 95-19 were collared 295 feet, 425 feet and 950 feet respectively to the west of drill hole 94-4. All holes were drilled at an angle of -70° to the east.

Based on encouraging copper assays announced on March 28, 1995, the company extended drill hole 95-16 to a depth of 485 feet to define the lower limits of known mineralization. Combined intervals over a 200 foot length returned values of 0.28% copper equivalent, including an 81 foot interval between 404 and 485 feet that returned values of 0.40% copper equivalent. Geochemical assay results for selected drill intervals are as follows:

HOLE NO.	INTERVAL FEET	WIDTH FEET	COPPER %	GOLD OZ/T
95-16	364-370	14	0.11	0.001
	404-485	81	0.10	0.039
	469-476	7	0.02	0.392
95-17	75-89	14	0.41	0.007
	404-417	13	0.13	0.002
	482-496	14	0.15	0.002
95-19	56-76	20	0.15	0.001
	128-135	7	0.48	0.012
	148-154	6	0.14	0.001
	167-174	7	0.10	0.001

Work on the property continues. As of this date, a soil sampling survey has been initiated over additional target areas that recently been ground magnetic surveyed. (SEE GCNL NO.63, P.2 FOR PREVIOUS RESULTS).
