WINSLOW GOLD CORPORATION

[WGC-V] 10,259,676 SHS.

L. G. Ross, President, Winslow Gold

Rock Creek, B.C.: In the Dayton gold camp near Greenwood, south-central B.C., reverse circulation drilling conducted in 1994 on Winslow's Rock Creek property intersected a structurally controlled skarn assaying 0.4 oz. gold/ton over a 1.5-metre intersection. Winslow will core drill the extension of the mineralization outlined by strong geochemical and IP anomalies. Winslow plans a three to four-hole program for a total of about 800 metres of drilling to start by mid-January of 1996. This program will follow up along the strike of the sulphide sections previously encountered. Winslow maintains an 85% working interest in the property.

Engineer Mine, B.C.: Winslow has continued with its pre-production bulk sampling at its Engineer Gold Mine located 30 km southwest of Atlin, northern B.C. In September, the mine was converted to track operation for greater efficiency. Before closing down the operation in early October, 380 tons of vein material was extracted and milled from the Engineer and Double Decker veins. All samples were sent for assaying and results are currently awaited. A further program of exploration of surface veins and dewatering of lower levels at the Engineer vein and sample collection is planned for the 1996 exploration season. This phase two program should permit the placement of 50,000 tons of indicated reserves into the proven reserve category. Winslow currently maintains a 50% working interest in this producing mine.
