BOOKER GOLD EXPLORATIONS LIMITED

[BGE-V] 5,407,023 SHS.

ADDITIONAL COPPER CORE IN FOR ASSAY - Hugh Grenfal,
president of

Booker Gold Explorations Ltd., has updated the diamond drill
program on the 100%-owned Hearne Hill project, 65 km northeast of
Smithers, B.C. Hole 95-17 was abandoned at 150 feet. Hole 95-18

was drilled at a 70° degree angle, bearing 340° from the site of
No. 95-16. Hole 95-19 was drilled from the same site at a 60° angle,
azimuth 90°. Both of these holes were drilled to 1,000 feet and cut
Hornfels volcanics with biotite, copper mineralization consisted of
chalcopyrite on fractures.

Diamond drill hole 95-20 was drilled vertically from a site 50
metres to the north of 95-16. This hole intersected siliceous
volcanics, breccia, and bottomed in biotite feldspar porphyry with
good secondary biotite alteration. This hole was well mineralized
with chalcopyrite on fractures and finely disseminated throughout
the porphyry.

Diamond drill hole 95-21 is currently being drilled from the
same site as diamond drill Hole 95-16 at a 70° angle to the southwest
to check a geochemical anomaly. The hole has intersected well-
mineralized breccia to a depth of 100 feet and will be extended to
1,000 feet. Mineralization consists of pyrite, chalcopyrite,
tetrahedrite, and chalcocite. (SEE GCNL NO.201, Oct.19/95, P.1
FOR PREVIOUS HEARNE HILL PROJECT INFORMATION)
