KENRICH MINING CORPORATION

[KRC-V] 18,679,228 SHS.

LATEST COREY PROJECT DRILL RESULTS - Ken Trociuk, CEO,
 Kenrich Mining

Corp., reports new assay results have been received from the T.V.
 Zone drilling on the 100%-owned Corey property six miles south of
 Eskay Creek and 19 miles north of Stewart, B.C.

HOLE NO.	INTERVAL FEET	LENGTH FEET	GOLD OZ/T	SILVER OZ/T
95-2	495.1-499.5	4.4	--	48.21
95-3	18.0-70.5	52.5	0.053	1.53
95-4	41.6-86.5	44.9	0.070	1.52
INCL.	73.4-76.7	3.3	0.386	4.97
95-14	178.0-185.0	7.0	0.060	1.07
	281.5-284.8	3.3	0.157	1.51
95-15	131.6-244.6	113.0	0.053	0.94
INCL.	200.1-203.4	3.3	0.843	2.06
	309.3-335.9	26.6	0.027	5.04

Gold assays for holes 95-3 and 95-4 were previously reported in GCNL NO.192, Oct.5/95, P.4. All holes reported are on line 4+00S and test an 800-foot wide section of the T.V. Zone to a depth of 400 feet. The zone is open both downdip and along strike.

Drilling has identified an important corridor of mineralization in holes 14 and 15. A thick black mudstone in the Hutchings Horizon is well mineralized with bedded massive and semi-massive pyrite sulphides plus low grade zinc. Areas of heavy zinc and lead mineralization are also present. Major intersections of low to medium grade silver mineralization, such as in holes 95-14 (64.4 feet grading 0.54 oz. gold/ton) and 95-15 (113.0 feet grading 0.94 oz. gold/ton) are indicative of a strong mineralizing system improving to depth.

Additional drilling has expanded the zone downdip and along strike. Holes 16 through 22 have successfully tested the zone over a 350-foot strike length, both north and south of line 4+00S. Assay results for holes 16 to 22 will be released when received. (SEE GCNL NO.205, Oct.25/95, P.4 FOR PREVIOUS COREY PROJECT DATA)
