PACIFIC MARINER EXPLORATIONS LTD.

[PMR-V] 9,830,693 SHS.

B.C. SKY-STAR CLAIMS OPTIONED - Victor Coulthard, director, reports Pacific Mariner Explorations Ltd. has recently acquired by option, the Sky-Star property, located on Kid Creek, 17 km east of Creston, B.C. It has been the company's objective to acquire the best Sullivan targets in southeast B.C. and the Sky-Star property meets this requirement. The Sullivan mine is located 60 km north-northeast and produced \$20 billion worth of silver, lead and zinc.

The Sky-Star property hosts a variety of geological features comparable to those at the Sullivan Mine. Previous workers on the property have delineated geophysical anomalies and follow-up diamond drilling of some of these anomalies has yielded intersections of vein and stratiform type lead, zinc and silver. Some of the best intersections are as follows:

HOLE NO.	WIDTH METRES	TYPE	SILVER OZ/T	LEAD %	ZINC %
S90-1	2.0	VEIN	2.18	8.52	2.38
S90-2	3.0	VEIN	2.69	8.17	0.10
S90-2	6.2	STRATIFORM	2.19	8.29	0.71
S90-3	1.0	STRATIFORM	10.06	12.12	-

This stratiform and vein type mineralization is located at about 700 metres stratigraphically above the same horizon that hosted the Sullivan Mine and possibly is connected to a feeder zone emanating upwards from the Sullivan horizon. Because of these encouraging results and because not much deep drilling has been done to date on the target, the Sky-Star property remains a most attractive target for further exploration. Further diamond drilling is planned for the spring of 1996.

The total consideration for the property acquisition, subject to regulatory approval, is \$87,500 cash, 100,000 shares and \$100,000 work program over four years. (SEE GCNL NO.199, Oct.17/95, P.5 FOR SHOREACRES PROJECT INFORMATION)
