MOLY PROGRAM UNDERWAY - Larry W. Reaugh, president,
Amcorp Industries Inc. and

Verdstone Gold Corp., reports Discovery Consultants are currently
conducting a geological mapping, prospecting and trenching
program on the molybdenum soils anomalies earlier reported on the
100%-owned Crow-Rea property located 1.5 miles south of past-
producer Brenda Mines in the Okanagan region of south-central B.C.

Included in this program, trenching will be conducted on the
moly float train which measures 30 feet wide by 150 feet long. The
visible moly found over the area has travelled very little as evidenced
by the sharp angular mineralized rock that makeup the train.

The moly-copper anomaly surrounds the visible high grade
moly showings (earlier reported) not unlike a halo or ring. The
anomalies are coincidental with magnetometer lows from the 1974
and 1995 programs. This phase will pin down drill hole locations to
facilitate a 10,000 to 12,000-foot diamond drill program. The
company is looking for an elephant target (100,000,000 tons) in
the 0.25% to 0.50% moly range. (SEE GCNL NO.183, 22Sept95.
