DEEP DRILLING CUTS GOLD AT- John W. Stollery, P.Eng., presi-
 SIWASH GOLD MINE, BC dent, Fairfield Minerals L t d . .
 reports five deep surface holes

were recently completed at the 100%-owned Siwash Gold Mine
near Merritt in southern B.C. These holes explored an area below
 the underground development where previous wide-spaced drilling
 had returned six encouraging intercepts of up to 11.69 oz.gold/ton
 over 2.9 feet. All five of the follow-up holes intersected the vein
 structure demonstrating excellent continuity and three of the five
 (206S, 207S, 209S) returned significant gold values from
 intercepts at vertical depths of 750 to 850 feet. This area remains
 unexplored at depth and along strike. SEE MAPS OVERLEAF P.1.

HOLE NO.	GOLD OZ/T	TRUE WIDTH FEET
91-97S	11.69	2.9
91-107S	2.48	1.3
91-108S	2.67	1.3
91-109S	0.83	1.3
95-287U	3.62	1.5
95-300U	9.43	0.7
95-206S	3.92	0.7
95-207S	0.78	1.1
95-209S	14.62	0.9

S-DENOTES HOLE DRILLED FROM SURFACE
 U-DENOTES HOLE DRILL FROM UNDERGROUND

The exploration program is now complete. Expenditures of \$2,000,000 funded extension of the underground access as well as 25,000 feet of diamond drilling in 217 underground holes and 21,000 ft in 98 surface holes. The bulk of the program comprised close-spaced (33 by 33-foot) definition drilling of the mineralized vein system within an 1,100 by 500-foot area, below and east of the open pit.

Results from the detailed grid drilling have been compiled in a database. This data is being analyzed by an independent consulting firm as well as by company personnel to determine a reserve inventory as part of the ongoing pre-feasibility study. The results of this study are expected to be available by year end. (SEE GCNL NO.173, 8Sept95, P.2 FOR SECOND QUARTER REPORT)
