MORE HIGHLAND VALLEY DRILL RESULTS - John Lepinski,
 president,
 reports Getty Copper Corp. has received assays from drill holes 95-12 to 95-18 at the 100%-owned Getty North porphyry copper deposit located in the Highland Valley, near Kamloops, B.C. The following are the results.

OXIDE COPPER - HEAP LEACH ROCK

HOLE NO.	THICKNESS FEET	TOTAL COPPER AVG. GRADE	NON-SULPHIDE COPPER AVG. GRADE %		% COPPER CONTENT AS NON-SULPHIDE
			GRADE	%	
95-12	157	0.62%	0.48		77
95-13	118	0.57%	0.34		59
95-14	77	0.43%	0.24		55
95-15	236	0.61%	0.55		90
95-17	87	0.47%	0.37		79
95-17	66	0.31%	0.20		65

PRIMARY COPPER SULPHIDES - MILLING ROCK

HOLE NO.	INTERVAL FEET	LENGTH FEET	AVERAGE COPPER GRADE %	
			GRADE	%
95-14	330-443	80	0.43	
	428-478	42	0.46	
	512-630	102	0.34	
	709-955	213	0.42	
95-17	219-357	124	0.49	
	495-652	142	0.53	
95-18	209-361	138	0.69	
	529-888	325	0.69	

The above tables show the categories of good grade copper mineralization in the heap leach and milling categories for drill holes DDH No. 12 to DDH No. 95-18. The majority of the rock not included in the above categories fall into the dump leach category. This is lower grade mixed oxide and sulphide copper mineralization suitable for processing by SX-EW method.

Diamond drill results to date on the Getty North deposit confirm the presence of ore grade materials. (SEE GCNL NO.185, 26Sept95, P.1 FOR PREVIOUS GETTY NORTH DRILL RESULTS)
