BOOKER GOLD EXPLORATIONS LTD.

[BGE-V] 5,407,023 SHS.

HEARNE HILL DRILL RESULTS - Shelley Hallock, director, reports
Booker Gold Explorations Ltd.
has received assay results from its Hearne Hill project 65 km
northeast of Smithers, B.C. and 15 km north of the Bell Copper
Mine in the Babine Lake District of B.C. The property is 100%
owned by Booker Gold with a 4% NSR, subject to buyout.

During the previous field season, drilling indicated a high grade
copper gold zone northeast and contiguous to the copper-gold
porphyry outlined by Texas Gulf Sulphur in the mid-1960's. A new
IP zone has been defined northeast of all previous work and is open
in all directions. The following assays are from the first holes on a
line which will cross the new IP zone, starting about 100 metres
northeast of historical work on Hearne Hill.

DDH95-14 VERTICAL HOLE TO A DEPTH OF 998 FT.

AVG. ACROSS ENTIRE HOLE 0.46% COPPER, 0.2 G/T GOLD.

INCL 398-698 FT (300 FT) 1.07% CU, 0.38 G/T GOLD.

INCL 548-648 (100 FT.) 2.32% COPPER, 0.80 G/T GOLD

DDH95-15, AT DDH95-14, 60', AZIMUTH 340' TO 588 FT.

AVG. ACROSS ENTIRE HOLE 0.47% COPPER, 0.2 G/T GOLD

INCL 208-308 FT (100 FT) 1.17% CU, 0.38 G/T GOLD

THE HOLE CUT A DYKE AND WAS TERMINATED AT 588 FT.

DDH 95-16, 50 M AT 340° FROM 95-15, VERT. TO 998 FT.

ASSAYS COMPLETED ON THE TOP HALF ONLY (THE HOLE IS
MINERALIZED THROUGHOUT)

SURF TO 513 FT, AV. 1.03% CU, 4.62 G/T AG, .43 G/T AU

INCL SURFACE TO 200 FT, 1.35% COPPER, 0.54 G/T GOLD

INCL 333-433 FT (100 FT) 1.93% CU, 0.82 G/T GOLD

The balance of the assays will be released when available. High
assays, which ranged up to 6.7% copper, were rechecked by the
laboratory. Booker Gold has now switched from BQ drilling to a
larger NQ core. A contract has been signed with JT Thomas Drilling
Ltd. and work will continue throughout the winter. (SEE GCNL
