HORSEFLY DRILLING UNDERWAY - Peter DeLancey, president,

Atna Resources Ltd., and

Ecstall Mining Corp. reports drilling is underway on the Horsefly

massive sulphide property, 80 km southeast of Prince Rupert, B.C.

SEE MAP OVERLEAF P.1. A recently completed ground

electromagnetic geophysical survey indicates several strongly

conductive anomalies coincident with a +2-km long sequence of

mineralized rhyolitic volcanic rocks. Assay results from grab

samples include values up to 13% zinc, 1.6% copper and 1.0 grams

gold/tonne. The companies plan a minimum 3,000-foot drill

program testing six target zones. The property has never been tested

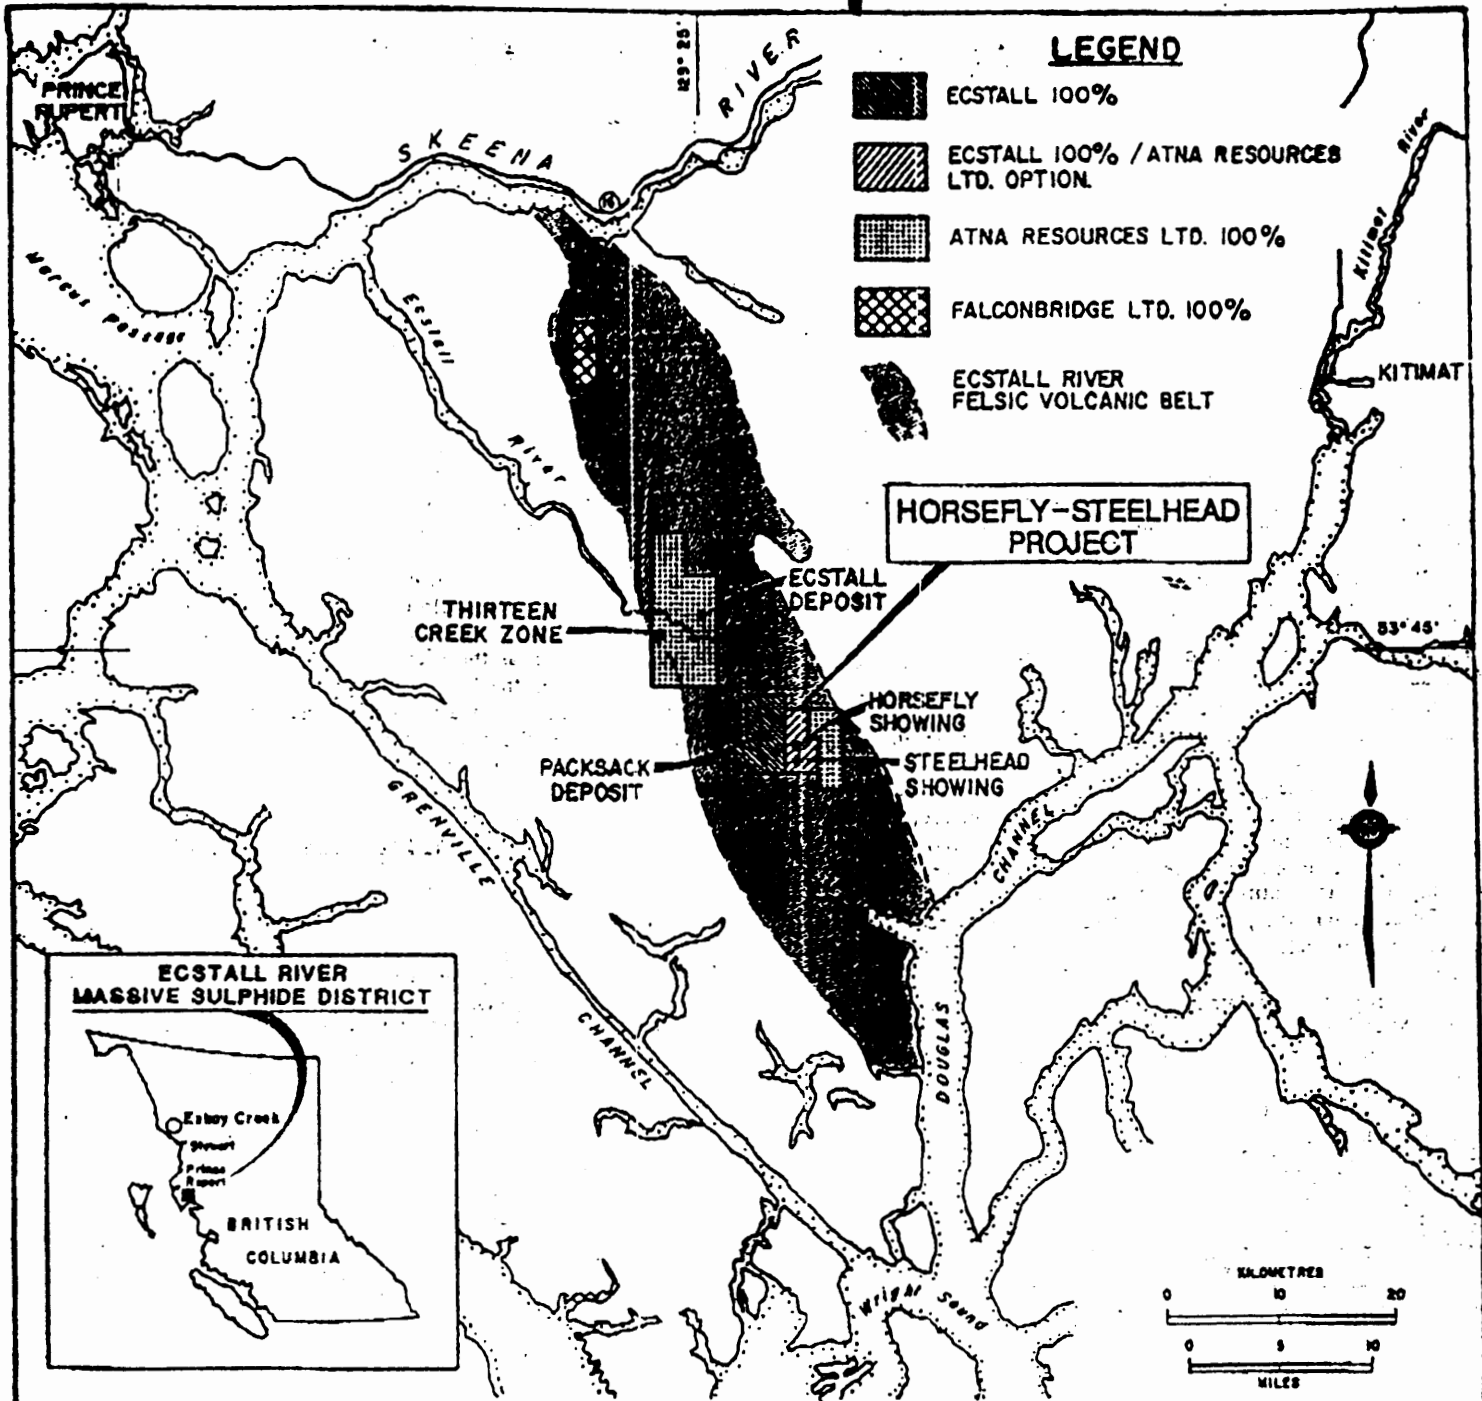

by drilling.

Atna Resources is the operator and can earn a 60% interest in the property by spending \$2,500,000 over 4.5 years and making payments to Ecstall Mining totalling \$110,000 and 200,000 shares. (SEE GCNL NO.189, Oct.2/95, P.1 FOR ATNA/WESTMIN WOLVERINE PROJECT INFORMATION)
