TEUTON RESOURCES CORP.

[TUU-V] 7,821,050 SHS.

MINVITA ENTERPRISES LTD.

[MVE-V] 3,568,159 SHS.

HIGH GRADE GOLD ASSAYS RECEIVED - Dino Cremonese, P.Eng., president, Teuton Resources Corp. and 50/50 joint venture partner Minvita Enterprises Ltd. have received trenching assays from their 80,000-acre Red Mountain area discovery located east of Stewart, northwest B.C.

Trench No.4, put in across a shear containing chlorite, hematite and quartz, returned the following values:

INTERVAL METRES	LENGTH METRES	GOLD OZ/T
0-1.5	1.5	3.376
1.5-3.0	1.5	8.309
3.0-4.5	1.5	1.406
4.5-5.5	1.0	0.092
0-5.5	5.5	3.587

Five other trenches were put in northwest and southeast of Trench No. 4 along the same structure with results as follows:

TRENCH NO.	LOCATION RELATIVE TO TRENCH NO. 4	WIDTH METRES	WIDTH FEET	GOLD OZ/T
11	35 M. TO NW	2.7	8.8	0.71
12	15 M. TO NW	6.7	22.0	0.56
13	47 M. TO NW	2.8	9.2	0.38
14	13 M. TO SE	3.1	10.2	3.77
15	20 M. TO SE	7.5	24.6	0.76

Four other trenches were put in on sub-parallel shears carrying similar mineralization to Trench No. 4. Results are as follows:

TRENCH NO.	LOCATION RELATIVE TO TRENCH NO. 4 SHEAR	WIDTH METRES	WIDTH FEET	GOLD OZ/T
10	20 M. TO SW	4.5	14.8	2.08
16	23 M. TO NE	1.5	4.9	7.18
17	12 M. TO SW	[LOW VALUES]		
18	33 M. TO SW	6.0	19.7	0.22

Visible gold has been observed in two of the trenches. Check assays were run on the Trench No.4 intervals and confirmed the original results. Assays were performed by Eco-Tech Laboratories of Kamloops, B.C. and Pioneer Laboratories of New Westminster, B.C. The property has been visited by a senior consulting engineer, representatives of a major mining company and three government geologists.

The shear zones form part of a 150-metre wide area of highly chloritized volcanic and intrusive rocks exposed over a minimum length of 500 metres. Prospecting samples have confirmed gold-bearing mineralization exists over at least 350 metres of this length, with the northwestern most chip sample returning 2.95 oz. gold/ ton over 2.0 metres.

Geophysical surveys have been run over the area of interest and assay results from 60 additional trenches are expected shortly. (SEE GCNL NO.142, 25Jul95, P.3 FOR PREVIOUS PROJECT INFORMATION)
