MOLY SOIL SAMPLING COMPLETED - Larry W. Reaugh, president, Amcorp Industries Inc., and joint venture partner Verdstone Gold Corp. report soil sample results have been received from Discovery Consultants which are currently being evaluated for a drill and trenching program on the 100%-owned Crow-Rea molybdenum property located 15 miles south of past-producer Brenda Mines in the Okanagan region of south-central B.C.

Recent values range to a high of 393 ppm molybdenum with most anomalies being open in one or more directions. Coincident anomalous copper anomalies ranging up to 350 ppm occur with the moly anomalies on the eastern section of the claims. Prior soil sampling on the most westerly anomalies have ranged to a high of 1,705 ppm molybdenum (0.17%), with several samples ranging from 135 to 1,505 ppm molybdenum.

The survey indicates six anomalous zones as trench and drill targets. Trenching and drilling are expected to be underway by month end. (SEE GCNL NO.174, 11Sept95, P.5 FOR PREVIOUS MOLY PROJECT INFORMATION)
