FURTHER TOODOGGONE ASSAYS RECEIVED - Henry Meyer, president, AGC Americas

Gold Corp., reports the latest results from the 1995 drill program on the 100%-owned JD claims located in the Toodoggone River area about 300 km north of Smithers, north-central B.C. SEE TABLE OF ASSAYS OVERLEAF P.3. These results represent 15 holes that were drilled during August along the Finn Zone. To date 56 holes have been drilled and assayed.

These assay results from holes JD95-74 to JD95-89 demonstrate the continuation of the structure and the grade of the Finn zone down-dip to the north and along strike to the southwest.

The company also reports holes JD95-75, -82 and -85 all contained visible gold. Metallic screen assays are being conducted for specific sample intervals from these holes and other holes containing visible gold. The results from these tests are being evaluated.

Hole JD95-83 was drilled several hundred feet northeast of the easternmost holes drilled to date and returned: 9.8 feet containing 0.403 oz.gold/ton including 3.3 feet containing 1.132 oz.gold/ton. The geological team believes these assays indicate a possible faulted extension of the Finn zone to the east. Holes JD95-74, -80, -81, -82 and -87 contained no significant gold values.

The 1995 drill program will continue to drill holes on the Finn zone targeting along the strike to the west and southwest to determine the magnitude of gold and silver reserves. (SEE GCNL NO.164, 25Aug95, P.2 FOR PREVIOUS JD PROJECT ASSAYS)
