## EASTFIELD RESOURCES LTD.

[ETF-V] 7,205,451 SHS.

B.C. DRILLING IN PREPARATION - J. William Morton, president, Eastfield Resources Ltd., reports option partner on the Indata Project, Clear Creek Resources Ltd., a private company, has advised heavy equipment is currently ploughing the 17-km access road preparatory to a diamond drill program expected to begin on February 7th.

The Indata property is a large claim group (8,600 acres) located about 130 km north of Fort St. James, BC. Indata has been extensively explored by Eastfield for the auriferous quartz-sulphide vein systems first discovered in 1987. The porphyry system believed to be responsible for these veins, although documented by Eastfield, has been largely untested to date. Late in 1995, Eastfield trenched one of the porphyry target areas and obtained mineralized intrusive rocks with up to 2.76% copper and a continuous 75-metre trench sample returning 0.36% copper from altered mafic volcanics. The porphyry target trenched in 1995 has since been named the Lake

Zone. Clear Creek's initial drill program will be about 2,500 feet in several areas of the Lake Zone.

Clear Creek can earn 50% of Eastfield's interest of 83% in the Indata project by spending \$1,500,000 and making \$200,000 of option payments over the next four years. IMPERIAL METALS CORP. [IPM-T][IPM-T] has a 17% interest. (SEE GCNL NO.13, 18Jan96, P.3 FOR PREVIOUS INDATA PROJECT INFORMATION)
