## AGC AMERICAS GOLD CORP.

[AGA-V] 8,997,227 SHS:

METALLIC ASSAY RESULTS - Henry Meyer, president, AGC Americas Gold Corp., reports the final set of results of a series of metallic screen assay tests by Eco-Tech Laboratories Ltd. in Kamloops, BC on core samples from diamond drilling in 1995 on its properties in the Toodoggone area 300 km north of Smithers, in north central B.C. The final set of results for holes JD95-109 to JD95-132 are printed overleaf P.1 and show significant intervals more than 0.1 oz. gold/ton. AGC has received all laboratory tests on samples from drill holes JD95-33 to JD95-132 completed on the Finn zone in 1995.

The higher grade results of JD95-132, the last and most southerly hole drilled, show the Finn Zone is opening to the west and to the south. Drilling in the 1996 season will start west and south of this hole to further develop the Finn zone resource.

The metallic screen assay tests were performed on selected samples to determine whether the "nugget effect" discovered earlier has been affecting the results of standard fire method assay results. The previously released and current results from these intersections has improved the overall grade by 8% to 20%. (SEE GCNL NO.25, 5Feb96, P.2 FOR PREVIOUS TOODOGGONE PROJECT DATA)
