## LAUSANNE MINERALS CORP.

SULPHIDES CUT AT MUNRO LAKE - Duane Poliquin, P.Eng.,  
reports Almaden

Resources Corp., has completed the first two holes of an 1,800-  
metre diamond drill program at Munro Lake, located 10 miles south  
of the former producing Brenda Mine near Summerland, Okanagan  
Valley, south-central BC. These holes have intersected what is  
interpreted to be the pyrite-rich shell of a large porphyry system.  
Logging is not complete but hole M96-1 has some sections with  
minor copper in the form of chalcopyrite and bornite as well as  
minor molybdenite.

Further drilling will be aimed at locating potential zones of  
copper-molybdenum which typically in porphyry systems are  
slightly removed from the IP-anomalous pyrite shell. Drilling is  
continuing.

Lausanne Minerals has an option to earn a 50% interest by  
providing \$500,000 for exploration plus certain cash payments to  
Almaden, the operator. (SEE GCNL NO.131, 8Jul96, P.2 FOR  
PREVIOUS MUNRO LAKE PROJECT INFORMATION)
