**SUPER TWINS RESOURCES LTD.**

[STN-V] 8,368,069 SHS.

**WOLLASTONITE FEASIBILITY UNDERWAY - Allen Achilles,**

president,

Super Twins Resources Ltd., reports a mine feasibility study is underway at the 100%-owned, 202-claim, 5,050-hectare property which encloses the ISK wollastonite deposit 13 km from the Homestake/ Prime Resources Snip gold mine north of Stewart, northwestern BC. Exploration in 1996 is designed to produce a full feasibility study for production which is scheduled to start in 1997.

The study includes surveying and baseline studies required for mineable reserves and infrastructure. This program is designed to:

- establish dimensions and grade within the outlined deposits;
- survey mineral claims in anticipation of a mining lease application;
- complete the surveying and baseline studies for the pipeline route and barge landing facilities;
- bulk sample the various deposit for testing to design the milling plant;
- complete all studies necessary to make a production decision.

The 1996 program includes diamond drilling of the previously outlined deposits to evaluate the size and purity of the mineable zones. To date, seven diamond drill holes have been completed in two separate areas. All holes have shown the presence of bulk mineable wollastonite skarn of high purity, as predicted from the work done in the previous season. (SEE GCNL NO.103, 28May96, P.5 FOR PREVIOUS WOLLASTONITE PROJECT DATA)
