BIG VALLEY RESOURCES INC.

[BV-ALBERTA] 12,775,543 SHS.

CENTRAL BC ASSAYS RECEIVED - Lloyd Tattersall, president, Big Valley Resources Inc., reports

definition diamond drilling is continuing on the Lloyd 2 zone of the 100%-owned Lloyd-Nordik property located adjacent to the Mount

Polley gold-copper ore body of Imperial Metals 60 km east of Williams Lake, central BC.

The current nine-hole program represents in-fill drilling and is intended to expand the Lloyd 2 geological resource outlined by earlier drilling. Step-out drilling to extend the outer dimensions of the Lloyd 2 zone will begin once the in-fill drilling has been successfully completed. Step-out drill sites are presently under construction. The core from current drill holes has not been assayed in numerical order. Assay results will be released when received. Recent assay results are as follows:

HOLE NO.	INTERVAL FEET	DEPTH FEET	COPPER %	GOLD OZ/T	SILVER GRAM/T
96-50	246-475	229	0.44	0.004	
INCL.	246-265	19	.96	.008	
INCL.	318-377	59	.77	.006	
96-56	12-39	27	.60	.022	
INCL.	12-20	8	1.860	.086	
INCL.	223-242	19	.37	.007	
DETAILED ASSAY RESULTS FOR THE 12-20 FOOT SECTION OF 96-56 ARE:					
96-56	12-20	8	1.860	.086	10.8

Additional assaying for silver will be carried out on both current and earlier drill holes. Diamond drilling will be ongoing during the summer on the company's extensive claim blocks as there are a number of drill targets not yet been tested. A survey grid is presently being established on the BV claims in order to complete geochemical and geophysical surveys.

Big Valley is negotiating with a number of major mining companies with respect to the Lloyd-Nordik and BV properties. (SEE GCNL NO.60, 25Mar96, P.2 FOR PREVIOUS PROJECT DATA)
