SILVER QUEEN ASSAYS RECEIVED - George Stewart, president,

New Nadina Explorations Ltd., reports holes 1 and 2 tested two targets on the Owen Lake Fault system north of the Chisholm zone, confirming the presence of mineralization in this structure on the 100%-owned Silver Queen property near Houston, BC. Both holes encountered a coarse fragmental volcanic, locally sheared and silicified with disseminated pyrite and sphalerite. Several narrow base and precious metal veins were intersected in both holes. Holes 3, 4 and 5 tested the Borrow Pit zone. Rocks were intensely altered to quartz-sericite-pyrite, with local zones of strong silification, pyrite-quartz stockworking veining and disseminated pyrite and sphalerite. Good stockwork developed was encountered over 550 feet. The stockwork-silification zone is underlain by a porphyritic, pyritized and argillic altered intrusive. SEE MAPS AND TABLES OVERLEAF PAGES 3/4.

Geological mapping has identified a 1,600 by 500-metre area which has been pervasively altered to sericite-pyrite-quartz, and contains multiple intrusive phases, numerous large faults and complex bedding. This area includes the Borrow Pit and Chisholm zone, as well as a large untested area of extensive ferricrete capping

located 500 to 700 metres northeast of the Borrow Pit. The ferricrete zone occurs at the intersection of three major structures (the Triple Point Junction zone). A large (seven-ton) float boulder of mineralized material was found in this area. Surface sampling in the Chisholm area is detailed overleaf P.4. Soil sampling has been completed over the large altered area, with results pending.

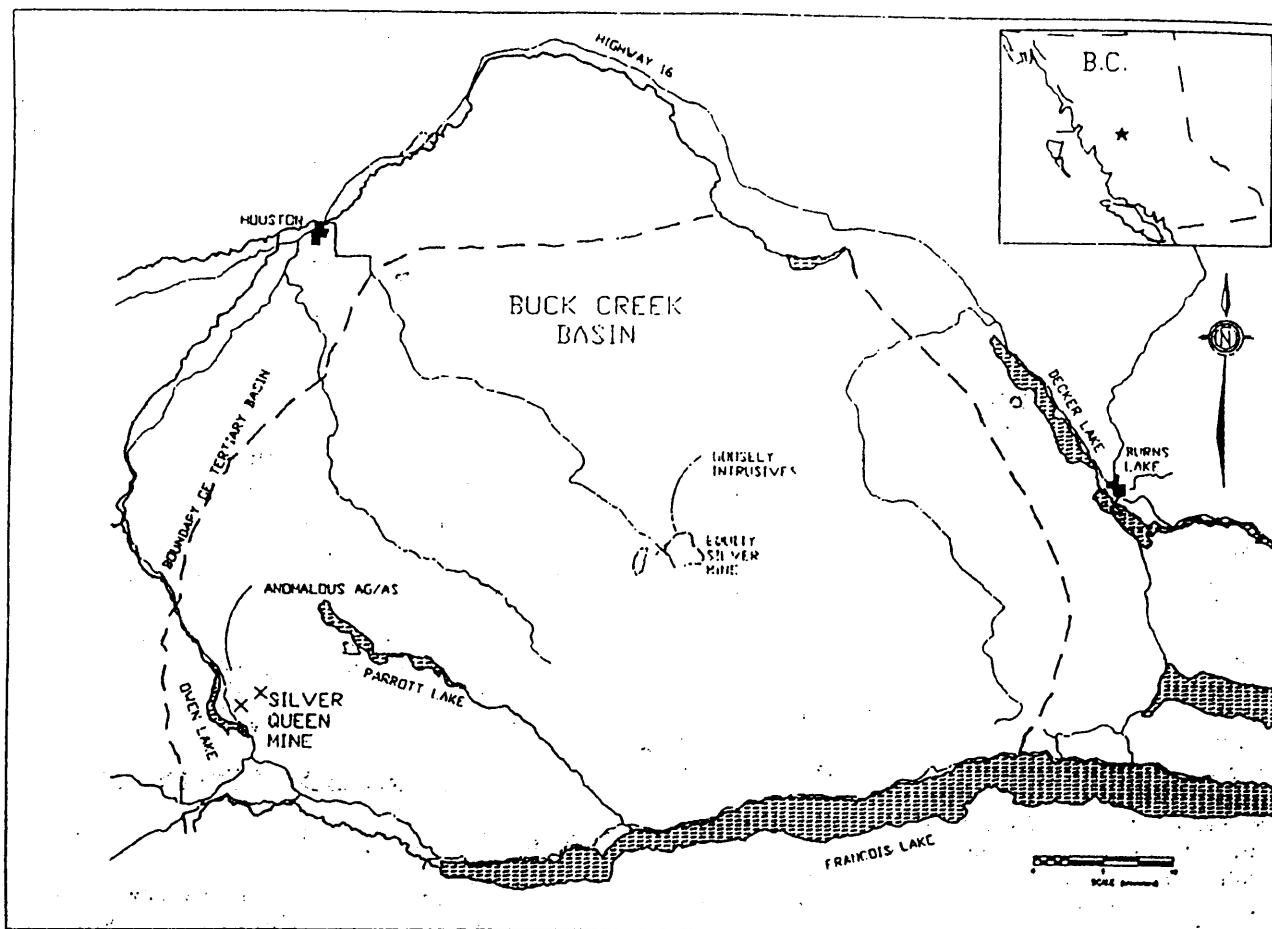

Kettle River Resources Ltd. is manager of the program and is partially funding the work. By exercising warrants, Kettle River could own 12% of New Nadina. (SE GCNL NO.98, 21May96, P.5 FOR PREVIOUS SILVER QUEEN PROJECT INFORMATION)

OWEN LAKE FAULT SYSTEM - DRILL RESULTS

Hole	Interval (feet)	Zn (%)	Ag (g/t)	Au (ppb or oz/t)	Length (feet)
Hole 96S-1	143.6 - 144	9.15	254	0.148 oz/t	0.4
	340 - 410	0.99	28.5	342	70 (see note)
Hole 96S-2	595 - 635	0.23	3.95	90	40
	666 - 667.5	0.78	24.9	0.044 oz/t	1.5
Hole 96S-3	31 - 180.2	0.29	1.59	150	149.2
	180.2 - 255			185	74.8
	300.5 - 413	0.31	3.8	128	112.5
	659 - 660	0.81	305	0.034 oz/t	1
Hole 96S-4	22 - 70	0.29	2.28	140	48
Hole 96S-5	80 - 170	0.34	5.8	75	90
	170 - 238.5	0.13	3.5	80	68.5

Note: This interval includes 4 narrow veins, making up 5.6' of the 70'.

CHISHOLM AREA SAMPLE RESULTS

	Zn (%)	Pb (%)	Ag (oz/t)	Au (oz/t)	Length (feet)
float boulder NE of Borrow pit	5.16	5.71	7.29	0.129	
Chisholm - Mac 1 vein	12.2	3.97	17.65	0.144	select grab
Chisholm - Mac 4 vein	0.57	1.35	4.14	0.121	0.5
Chisholm area argillite altered tuff	0.44	0.26	1.18	0.039	8
