BOOKER GOLD EXPLORATIONS LTD.

[BGE-V] 6,624,413 SHS.

HEARNE HILL MINERALIZATION EXTENDED - Chris Sampson,
president,

Booker Gold Explorations Ltd., reports routine detailed logging and sampling of last winter's drill program at the 100%-optioned Hearne Hill copper-gold project has extended results announced April 1, 1996 in DDH 96-36. The property is located 65 km east of Smithers and 15 km north of the Bell Copper Mine in the Babine Lake porphyry copper belt of central BC.

The intercept from 517 feet to 566.4 feet has been extended by over 20 feet. The latest tests run were in the form of rock geochemistry with highs running to 9,547 ppm copper (about 1%) and up to 434 ppb gold. Several of the other intercepts previously reported have also been extended with high rock geochemistry. These sections have intersected a new breccia and fracture zone immediately north west of the Chapman Zone. Current diamond drilling has been relocated to further test this new zone.

The above results are now being fire assayed and full details of average grades and lengths will be reported when received. (SEE GCNL NO.91, 9May96, P.3 FOR PREVIOUS HEARNE HILL DATA)
