COPPER/MOLY RESERVES ESTIMATED - Larry W. Reaugh,  
 president of  
 Amcorp Industries Inc. and Verdstone Gold Corp., reports potential  
 reserves on their recently acquired HED copper/molybdenum  
 prospect located 10 miles south of their Crow Rea Discovery which  
 is about 15 miles south of former producer Brenda Mines near  
Summerland, south-central B.C. (SEE MAP OVERLEAF P.3).

The HED reserves are based on 14 widely-spaced diamond and  
 percussion holes drilled by Anaconda Canada Exploration Ltd. in  
 1981. The 14 holes average about 90 metres in depth with many of  
 the holes stopped in ore grade material.

The area encompassed measures about 1,000 by 350 metres with  
 a vertical mineralized interval of 27 metres. The resource is also  
 within an area of coincident moly, copper and IP anomalies.  
 Possible reserves are open in all directions as well as to depth and  
 currently stand at: 25,350,000 tons grading 0.161% copper and  
 0.067% MoS<sub>2</sub> or a copper equivalent of 0.386% copper.

Some of the better previous drill intersections are as follows:
