**BIG VALLEY RESOURCES INC. [BV-ALBERTA]**  
EXPLORATION RESUMED - Big Valley Resources has resumed  
ON COPPER PROJECT exploration work on the Lloyd-Nordik  
copper property, 60 km east of  
Williams Lake, B.C. Over the past month a trenching program has  
been carried out to test a number of geochemical anomalies identified  
during the 1995 field surveys. Two of the recent trenches, 750  
metres apart, contained disseminated chalcopyrite, bornite and  
pyrite.  
The recent trenching has identified a number of drill targets  
within an area of 300 metres by 1,000 metres. The diamond drill  
equipment is on the property and crews will be mobilized in the near  
future.  
Additional drilling will also be carried out on the Lloyd 2 target.  
This drilling will test the extent and continuity of the zone of 0.392  
oz/ ton gold zone intersected in diamond drill hole 94-16.  
The company also announced Montgomery Consultants Ltd. of  
Vancouver are finalizing an ore reserve calculation for the Lloyd-  
Nordik property. Future drilling will focus on those areas indicating  
potential for increasing reserve grades and tonnage.
