## SPOKANE RESOURCES LTD.

[SKN-V] 12.572.720 SHS.

HIGHER GRADE COPPER AT MAC PROJECT - G. Arnold Armstrong, chairman, Spokane Resources Ltd., reports initial 1996 diamond drilling results from the Mac prospect, located Babine Lake area about 42 km southeast of the Granisle and Bell porphyry copper deposits of central B.C. The first two drill holes from the winter program offset holes 95-15, which cut [137 metres (450 ft) of 0.208% MoS<sub>2</sub> and 0.176% copper], and 89-4 which cut [120 metres (421 ft) of 0.14% MoS<sub>2</sub> and 0.16% copper].

Drill hole 96-24 was located midway between 95-15 and 89-4, which are 125 metres apart. Drill hole 96-25 was located 50 metres north of drill hole 89-4. The results of these drill holes are printed overleaf P.3.

These results outline a zone of copper enrichment within the Moly/Copper porphyry system. This enhances the economic potential of the porphyry mineralization defined within the Mac property. It also increases the copper potential outward from the molybdenum-rich intrusive contact zone. The interval of mineralized volcanics in drill hole 96-25 was reduced by a younger barren dyke from 135 metres to 167 metres. Drill hole 96-26, located 100 metres south of drill hole 89-5 failed to intersect economic grades of mineralization, confirming the presence of a lower grade zone to the northeast of the intrusive.

Drill hole 96-27, located 50 metres south of 95-15 was drilled to further test this copper rich zone. Visual examination of the drill core confirms significant copper and molybdenum mineralization. Further results will be released.

Spokane can earn a 60% working interest in the Mac property from RIO ALGOM LTD. [ROM-T, M] by spending \$2,000,000 on exploration. (SEE GCNL NO.43, 29Feb96, P.5 FOR PREVIOUS MAC PROJECT INFORMATION)
