STIRRUP CREEK GOLD LTD.

[SGU-V] 4,437,400 SHS.

WATSON BAR BULK TEST UNDERWAY - John W. Fisher, P. Eng.
director, Stirrup Creek
Gold Ltd., reports Process Research Associates Ltd. are conducting
metallurgical testing on a one-ton sample from the 70%-optioned
high grade Watson Bar Gold project, located 33 km. due west of
Clinton, BC. The representative sample was taken over 17 areas on
the Zone V Trench. Assays ranged from 0.048 to 7.21 oz.gold/ton
and contain a weighted average of 1.87 oz.gold/ton. The test will
determine the free gold content and characterize the remaining gold
prior to the development of a more detailed program.

Currently the 20-man camp at Watson Bar is being reactivated
with preliminary sampling and geological surveys taking place later
this week. This will be followed by excavator trenching and
diamond drilling.
