FIRST HALL-HARPER ASSAYS RECEIVED - Glenn E. Collick,
president, reports

American Comstock Exploration Ltd. has received assay results of the first diamond drill hole No. 96-3 completed on its Hall-Harper Creek property located in the valley of the North Thompson River about 75 north of Kamloops, south-central BC. This hole intersected wide zones of pyrite-chalcopyrite mineralization which extends the known mineralized bodies to the northeast. Averages from hole No. 96-3 are as follows:

INTERVAL	LENGTH	LENGTH	COPPER	SILVER
METRES	METRES	FEET	%	OZ/T
144-315	171	561	0.310	0.036
INCLUDING	126	413	.352	.04
AND	18	59	.690	.05

Samples from hole No.4 have been submitted for assay, with results pending. In addition, the core from the remaining six holes are being split and will be submitted for assaying on a priority basis. Results from these assays will be released when available.

Due to personal reasons, Raymond J. Runcles resigned as a director. The board has not yet filled the position.
