## NOBLE METAL GROUP INC.

[NMG-V] 23,861,709 SHS.

PLACER OPERATION PREPARES - Dorothy Dennis, president,  
FOR GOLD PRODUCTION Noble Metals Group Inc.,  
reports preparation of the mine

site area for production was continued throughout the 1996 mining  
season. The placer leases are located near the confluence of  
Snowshoe and Keithley Creeks 70 miles east of Williams Lake, BC.

Over 65,000 cubic yards of overburden material was removed  
from the mining area and new hauling roads constructed. For safety

reasons excavation of several benches was completed to prevent  
slides and sluffing of gravel materials onto the work site below.  
Several drainage ditches and a main waterway were constructed to  
facilitate the excess water flow created during spring runoff.

A small test program of the upper gravels in the centre and most  
eastern channel (or third channel) verified the existence of fine gold  
averaging US \$5.70 per cubic yard based on a gold price of US \$380  
per ounce.

An induced polarization survey was completed by partner Naptau  
Gold Corp. over a portion of the production area. The resistivity  
values of the centre channel revealed a narrow or gulch-type  
depression in the bedrock. The resistivity values of the eastern  
channel identified a pronounced depression in the bedrock with a  
magnitude of some 75 metres in depth. These channels were also  
identified in the 1995 seismic refraction survey. Delivery of the  
placer production plant is expected about two weeks after the camp  
and its facilities are opened in the spring of 1997. (SEE GCNL
