HEARNE HILL DRILL RESULTS - J. Paul Stevenson, director, reports
 Booker Gold Explorations Ltd.

continues to receive favourable results from diamond drill holes on
 the 100% optioned Hearne Hill property 65 km northeast of
 Smithers, BC and about 20 km north of the former Bell copper mine.

Results from diamond drill holes 96-68 and 96-69 complement the
 results from 96-66 and 96-67 and confirm the high grade copper-gold
 breccia zone widens at depth. Diamond drill hole 96-69 intersects
 the top of the breccia zone where the mineralization consists largely
 of pyrite. Hole 96-68 (drilled from the same location) intersects the
 breccia at depth where the copper content is much greater. Results
 from diamond drill holes 96-68 and 96-69 are as follows:

DDH 96-68: BEARING 110° - 75° ANGLE
 AVERAGE ACROSS THE HOLE (247.5 M, 814 FT) - 0.60%
 COPPER, 0.15 GRAMS GOLD/TONNE

	INTERVAL METERS	LENGTH METERS	LENGTH FEET	COPPER %	GOLD GR/T
INCLUDES	4.6-13.8	9.2	30	1.2	0.31
INCLUDES	71.6-108.8	37.2	122	1.1	.24
INCLUDES	102.7-108.8	6.1	20	1.84	.32
INCLUDES	105.8-108.8	6.1	10	3.0	.4
INCLUDES	121.0-160.6	39.6	130.3	.74	.17

INCLUDES	118.0-124.1	6.1	20	1.2	

Preliminary results from drill hole 96-70 are encouraging with
 10 foot intercepts of more than 3 grams gold/tonne. Results from
 DDH 96-70 will be available shortly. High and varied gold results in
 recent holes suggest the possibility of native gold associated with

the breccia zone. A number of intercepts from holes located near the
 breccia zone are currently being tested for native gold. Drilling is
 now underway 24 hours/day. Booker Gold plans to add a second drill
 in the next few weeks.

Christos Doulis, B.A., has joined Booker Gold's corporate
 development group in Toronto. Mr. Doulis can be reached by
 contacting the Toronto office (416) 214-4744. (SEE GONL NO.205,
 Oct.23/96, P.1 FOR PREVIOUS HEARNE HILL PROJECT DATA)
