LYSANDER GOLD CORP.

[LYS-V] 16,097,221 SHS.

LORRAINE PROJECT DRILLING REPORT - Donald K. Mustard,
 director, Lysander

Gold Corp., reports the recent drill program at the 100% owned
Lorraine property 93 miles north of Fort St. James, BC continues to
 generate encouraging copper/gold values similar to those
 encountered in the successful 1995 program. The Lorraine property
 is situated along the western rim of the 10 km diameter circular
 structure characterized by the presence of copper and/or gold
 occurrences and now referred to as the Jajay Ring.

A total of 10 holes were drilled. Hole 96-37 was drilled from
 Platform No. 7 to confirm the depths of the Upper Main Zone. In the
 Eckland Zone, poor weather prevented access to the defined target
 areas. Five short orientation holes, 96-38 to 96-42, were therefore
 drilled in substitution. SEE DRILL HOLE MAP OVERLEAF P.1.

In the Bishop Zone, one hole, 96-36, deepened 95-36 and two
 holes, 96-43 and 96-44 were drilled to test southward extension of
 the Bishop Zone some 300 metres south of the original section
 drilled in 1994. The program was successful in tracing the zone with
 some high value copper intercepts; see table below:

ZONE	HOLE NO.	AZ °	DIP °	INTERVAL METRES	LENGTH METRES	COPPER %	GOLD GR/T
BISHOP	96-36						
	(95-36)	055	-45	154.5-197.7 221.0-242.9	42.7 21.3	0.64 .49	0.06 .12
UPPER							
MAIN	96-37	135	-50	26.5-154.4	128.0	.84	.30
ECKLAND	96-39	030	-45	3.0-11.3	8.3	2.06	.86
BISHOP	96-43	055	-50	108.8-203.9	95.1	.76	.20
BISHOP	96-44	050	-45	120.1-145.5 210.7-242.9	27.4 32.2	1.07 1.49	.10 .18
NORTH							
CIRQUE	96-45	030	-45	8.2-30.9	22.7	.46	.13

In the North Cirque, geochemical sampling indicated there is a
 large new zone containing copper and gold to be explored. There are
 three or more zones which appear to have the potential for hosting
 the high-grade tonnages being targeted in the Lorraine property.
