KENRICH MINING CORP.

[KRC-V] 21,185,823 SHS.

FIRST COREY DRILL RESULTS - Kenneth Trociuk, president, reports Kenrich Mining Corp. has received results for the first two diamond drill holes on the 100%-owned Corey property located 70 km north of Stewart in the Eskay Creek area of northwest BC. The 10 hole Phase II program was expanded with 16 holes completed and still drilling. The drill holes are distributed around the primary targets, with 10 holes on the TV Zone, five holes on the Cumberland, one hole on the Bench and two holes presently being drilled on Sheila Creek.

The TV Zone drilling has extended the mineralized zone to the north and east. Much of the drilling tested the high grade silver mineralization located in trenches this summer as previously released. Results for the first two holes on the TV Zone have been received and are reported below:

TV 23 - retest of old zone - 4.0 m (13.2 feet) - 0.074 oz. gold/ton

TV 24 - silver rich zone - 7.3 m (25 feet) - 0.085 oz. gold/ton and 5.35 oz. silver/ton an equivalent value of 0.156 oz. gold/ton.

The results in TV 24 are significantly higher than the results from last year's drilling. The remaining TV Zone holes were drilled to test this higher grade zone and their results will be released when received. (SEE GCNL NO.172, 5Sept96, P.3 FOR PREVIOUS COREY PROJECT INFORMATION)
