FURTHER CROW-REA MOLY ASSAYS - Larry W. Reaugh,  
p r e s i d e n t .

Verdstone Gold Corp. and Molycor Gold Corp., reports the following results from drilling on the Crow-Rea Webb-Site Zone near Summerland, Okanagan region, south-central BC. Drill hole results are as follows:

HOLE NO.	INTERVAL FEET	LENGTH FEET	MoS <sub>2</sub> %	SLUDGE
96-94	85-109	24	0.100	0.341% MoS <sub>2</sub>
	112-124	12	.124	(97-127 FT)
96-98	120-156	36	.291	0.225% MoS <sub>2</sub>
INCL.	(120-147)	27	.381	(115-127 FT)
	423-426	3	.107	
96-100	139-154	15	.101	
96-107	103-124	21	.147	
	130-148	18	.076	

Drilling is continuing. Results will be reported when received.

At the Salal Creek molybdenum property, located 70 km northwest of Pemberton, southwest BC, the drill is now on the Float Creek drill site and has completed 350 feet of a 1,200-foot vertical hole. The drill is currently in the quartz sericite pyrite zone which is expected to be immediately above the moly mineralization. Four to five drill holes are expected to be drilled from this site.

The companies are currently drilling a 3 to 4 hole program on the HED property located 15 km. south of the Crow-Rea moly property noted above. The HED has a drill inferred reserves of 25,350,000 tons grading 0.112 MoS<sub>2</sub>, and 0.161% copper. (SEE GCNL NO.164, 23Aug96, P.5 FOR PREVIOUS CROW-REA AND SALAL CREEK PROJECT INFORMATION)
