## INTERNATIONAL SKYLINE GOLD CORP.

[ISC-V] 24,693,221 SHS.

BEAR LAKE DRILLING UNDERWAY - C.A. Grandison, president, reports International Skyline Gold Corp. has started a 2,500-foot drilling program on its optioned Bear Lake copper, molybdenum property. The property is located five km from the Takla extension of BC Rail, 160 km north of Smithers and is well situated with respect to Hydro Power at Takla Landing which is 50 km to the south. Skyline can acquire a 100% interest on the property on payment of \$250,000, a 2% NSR and a commitment to spend \$1,750,000 on exploration over five years.

The drilling plan includes four new holes which will help define the limits of the known resource. The deposit will also be examined for its gold and silver potential as these types of porphyry deposits frequently contain recoverable precious metal values.

Of 10 previous diamond drill holes which tested the anomalies, two of the most significant holes encountered ore grade mineralization. One of these holes averaged 0.23% copper and 0.06% molybdenum over 460 feet while the other averaged 0.27% copper and 0.06% molybdenum over 521 feet. These holes were located 570 feet apart and both bottomed in mineralization. (SEE GCNL NO.109, 5Jun96, P.5 FOR BRONSON SLOPE INFORMATION)
