ISKUT AREA TRENCH ASSAYS - Kevin C. Whelan, president has reported trench assays from Royal Bay Gold Corp.'s Waratah property, Iskut River,

Northwestern BC. The Cooper Zone has returned the following significant assay results:

HOLE NO.	LENGTH METRES	GOLD GR/T
T-96-1	3	11.60
T-96-3	5	3.92

The 1996 program has defined the Cooper-Zone as a sulphide-rich shear zone ranging from 3 to 5 metres wide over a strike length of 150 metres. A sulphide-rich interval in trench T96-5, which returned low grade gold assay results, indicates the zone is open to the northwest.

Assay results from Trench T96-6, located 25 metres northwest from T96-5 are expected within the next two weeks.
