DALMATIAN RESOURCES LTD.

[DTN-V] 6,888,642 SHS.

BC ASSAYS RECEIVED - Frank Milakovich, president, Dalmatian Resources Ltd., reports exploration results from channel samples taken from the Apex zone of its 100% owned 70 square km Tay property located 37 km northwest of Port Alberni, Vancouver Island, BC. Gold values range from 0.118 to 0.342 oz/ton. Values for other minerals found are copper 2.3%, lead 2.3%, zinc 2% and a positive showing of silver and nickel.

The Apex area is part of a eight km vein structure which was identified by Roy Laminile, geologist for Phillips, Barrett, Kaiser of Vancouver, who did an extensive report of the area for Dalmatian in 1989. The Apex structure, from which the samples were taken, measures 7 metres in width. The structure has been traced for at least 1 km and is believed to be open to the east and west. Dalmatian is currently drilling the Apex vein system, with results due shortly.

Previous results prompted Dalmatian to acquire an additional 30 square km, east and west of the original claims. Target areas within in the current drilling program include the Tay, Morning and Apex structures. These are three of 34 defined targets identified by Burgoyne Geological Inc. (SEE GCNL NO.180, 18Sept97, P.2 FOR PREVIOUS TAY PROJECT INFORMATION & CLAIM MAP)
