INTERNATIONAL BUTEC INDUSTRIES CORP.

[IB-V] 9,293,152 SHS.

FOLLOW-UP WORK RECOMMENDED - International Butec
FOR GOLD NEAR KAMLOOPS Industries has begun field
work on the NED claim

block consisting of 12 units, located 2.5 km. west of the Afton Mine
in the Kamloops Mining Division.

Previous diamond drilling intersected gold values in two different geological environments. Hole No. 94-1 intersected two gold-bearing zones within a 20.7 metre section of brecciated, graphitic mudstone and sandstone. One intersection yielded 1.87 oz/ ton gold over a core length of 8 feet (64 g/t gold over 2.44 m). A second intersection 7.6 metres further down the hole intersected 0.43 oz/ ton gold over 5 feet (13.4 g/t over 1.52 m). Hole No. 94-3, located 200 metres to the north of hole No. 94-1, intersected 0.313 oz/ ton gold over a 5 foot core length (10.7 g/t over 1.54 m) within a zone of silicified, pyritic brecciated volcanics.

H. Leo King, P.Geol., has recommended an initial program of geological mapping, induced polarization, magnetic and geo-chemical surveys and diamond drilling at a cost of \$200,000.
