RAINBOW DRILLING TO START - James T. Gillis, president,
Getchell Resources Inc.

30%, reports Teck Corp., 70%, will start drilling on the Rainbow property 10 miles southwest of Kamloops, BC in early February 1997. The 1997 work is aimed at defining an economic bulk underground copper-gold-molybdenum-palladium target within the Rainbow breccia pipe. A review suggests a minimum requirement would be approximately 20,000,000 tonnes grading 1.5% copper with significant gold-molybdenum-palladium credits.

A five hole, 3,000 metre (600 metres each) initial diamond drilling program will test the depth extent of the high grade copper-gold mineralized breccia pipe which cores the Main (or No. 2) Zone.

The previously reported drill hole No.R-95-24 (intersected the breccia pipe from 171.6 metres to 267.6 metres at -45° and encountered 96 metres of 1.4% copper (with 0.24 grams gold/tonne and 0.0448% molybdenum). Testing thus far has shown that the mineralized breccia pipe continues to 300 metres. The 1997 program will test the breccia pipe below 300 metres depth. (SEE GCNL NO.228, 26Nov96, P.3 FOR PREVIOUS RAINBOW PROJECT INFORMATION)
