Spanish Mountain, BC (Wildrose 49%/Consolidated Logan 51% optionee): At the Spanish Mountain gold property, located near Likely, BC, bulk tonnage and high-grade vein gold occurrences have been indicated by numerous trenches and drill holes. In 1996, an exploration program which included 2,700 metres of surface trenching in a series of eight trenches, suggested two mineralized zones. Zone One is at least 750 metres long and averages 180 metres wide and is open to the southeast and northwest. The average grade of Zone One is 0.491 grams gold/tonne. Zone Two is 170 metres up slope of Zone One and was encountered in the first 112 metres of the

first trench. The average grade of the second trench is 0.841 grams gold/tonne. The 1997 exploration program is still under review.
