JD PROJECT DRILL RESULTS - Henry Meyer, president, reports
AGC Americas Gold Corp. has completed three holes on its 100% owned JD property located in the Toodeggone region 40 miles north of the Kemess Mine, north-central BC. The first series of holes are targeted to confirm significant gold mineralization present in the Bonanza Zone. Drilling has intersected strong silicification characterized by moderate to heavy pyrite in association with barite which in the past has returned high grade values similar to previous drill hole AL87-30. Core recovery is excellent. A further six holes are planned on the Bonanza before the program is shifted to the Finn Zone. Assays will be released as received and analyzed.

HOLE NO.	INTERVAL METRES	WIDTH METRES	WIDTH FEET	GOLD OZ/T
A87-30	23.60-50.90	27.30	89.54	0.740

AGC has completed 54,000 feet of diamond drilling to date on the 58,000 acre (90 square mile) property. (SEE GCNL NO.124, 27Jun97, P.2 FOR PREVIOUS JD PROJECT INFORMATION)
