## BARON GOLD CORP.

[BXG-V] 7,777,032 SHS.

STREBE TRENCHING RESULTS - Harvey Dick, president, reports Baron Gold Corp., has received excavator trench results for the 100% optioned Strebe gold property, 7,500 feet elevation, in the Tillicum Gold Camp, 28 km south of Nakusp, southeast BC. Results are tabled overleaf P.2. A total of 116 samples were collected over specific intervals on the outcrop exposures in the main Strebe trench. The sampling tested hornfelsed and skarned argillites and schists of the Mississippian Age Milford Group in contact with feldspar porphyry sills. The trenches showed significant gold results over at least 30 metres in a north south trend and are open in these directions. The current drilling program is confirming and testing the continuity of this mineralization down dip to the west.

Currently, four drill holes have been completed. The holes have just been sent in for assay. A report on these results will be published as soon as received. (SEE GCNL NO.165, 27Aug97, P.2 FOR PREVIOUS STREBE PROJECT INFORMATION)
