BRONSON SLOPE PROJECT UPDATE - Ronald C. Shon, chairman.

International Skyline Gold Corp., provides an update on the Bronson Slope project located in the Iskut River area about 150 km north of Stewart, northwestern BC. On 23Jul97 an agreement was completed whereby Int'l Skyline acquired a 42.73 hectare parcel of surveyed mineral claims from Prime Resources Group Inc. Under the terms of agreement, Int'l Skyline will pay Prime Resources a 3% NSR and escalating minimum annual payment. The claims cover the Highwall slope lying to the south of Skyline's proposed Bronson slope open pit gold, copper mine.

In addition to the ground, Skyline acquired the drill core from exploration drilling performed on the ground by the Snip joint venture between 1986 and 1994. Since the acquisition of the Highwall property, Skyline has surveyed all the drill hole collars, relogged the drill core, performed in-fill sampling and assaying of perviously unsplit core intervals, and resplit and reassayed all previously sampled intervals.

This work has defined a zone of gold mineralization parallel to both the Bronson Slope porphyry deposit and the Snip shear zone vein deposit. This Highwall Gold Zone exhibits a classic progression from widespread disseminated mineralization at higher

elevations through a stringer zone that progressively narrows with depth, to narrow high grade veins at the elevations where mining has occurred at Snip. The disseminated mineralized zone has been outlined by wide spaced drilling for 800 metres of strike length within the Highwall property.

The potential of the disseminated part of the zone is indicated by six drill holes containing 0.58 grams gold/tonne across an average true thickness of 70 metres. The deeper, narrow high grade part of the zone has only been tested by a single 1994 drill hole, number S-126. A recent sample collected as part of the in-fill sampling program taken from this hole contained 15.7 grams gold/tonne across 2.0 metres. This intersection is located at 470 metres elevation about 190 metres along strike from the nearest development heading of the nearby Snip mine.

Skyline has engaged Geographe International MFS Inc. to assist in approaching mining companies regarding the possibility of joint venture or strategic alliances to assist in the development of the open pit and underground potential of the Bronson Slope property. (SEE GCNL NO.145, 29Jul97, P.4 FOR PREVIOUS RELATED PROJECT INFORMATION)
