MUNRO LAKE, B.C. * VSW JUNE 8, 87

A crew has been mobilized to the Munro Lake silver property, near Summerland, B.C. This property has several large silver geochemical targets in an environment that is favourable for silver deposits, and bears considerable resemblance to the nearby Utica and Highland

82E/12
Bell silver mine. Work planned includes surface prospecting, mapping, further detailed geochemical surveys, trenching and follow-up drilling of targets.

KING BAY, ONTARIO

Work by Almaden and others has outlined a small high grade zone on this property, and further drilling is planned in the near future to extend this zone. Drilling will test the down plunge extension of the high grade zone as well as other occurrences along a favorable structure that is over one and a quarter miles long.

FLOW-THROUGH FUNDS

Almaden has raised \$600,000 in flow-through funds to carry out these programs, as well as to finance a search for other, new precious metals properties.
