Eighty (80) kilometers of Linecutting, I.P. Survey and Soil Geochemistry have now been completed and diamond drilling will follow up on the Main Boulder area, New Showing and Southern Extension. Also detailed drilling will follow up on two previous drilled holes which assayed as follows:

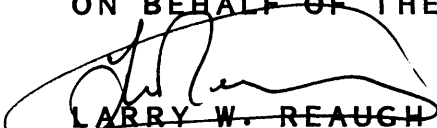

Hole No.	Interval Meters	True Width Meters Feet	Assay Results		
			Zn%	Pb%	Ag oz/ton
78-6	78.4 - 86.2	7.80 (25'- 7")	16.10	2.80	N/A
87-10	69.4 - 77.0	7.60 (24'-11")	12.21	2.49	.24

The twenty two thousand (22,000) acre property contains in excess of thirty (30) kilometers of mineralized strike length with the massive sulphide exposed at surface in several locations.

The joint-venture has estimated the property contains a drill indicated tonnage of 1,643,000 tons grading 8.6% Zinc, 1.40% Lead and 0.25 oz/ton Silver and is open along strike and down dip.

Further drill results will be reported as they are received.

In this phase of the diamond-drilling 62 holes tested the New Showing and Main Boulder Zones. Assay results from the final six holes will be reported when they are received.

The next phase of drilling, commencing in early October, is intended to evaluate the known high-grade zinc mineralization on the southern portion of the property. This 14,000-foot (4,250-metre) program will test the massive sulphide mineralization between the No-Name Boulder, North Strat, Horne and Autumn showings over a strike length of 5 kilometres. Recent surface sampling at these showings returned zinc values in the range 15% to 33%.

FIRST PHASE OF DRILLING PROGRAM COMPLETED  
AT CK PROPERTY, B.C.

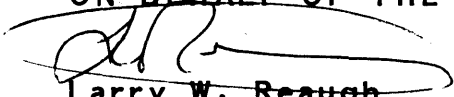

Larry W. Reaugh, President of Rea Gold Corporation and Verdstone Gold Corporation, is pleased to report the results of the last five holes of diamond drilling in the initial phase of the 33,000 foot program. Drilling results are as follows:

Hole No.	Interval Metres	Intercept		Assay Results		
		Metres	Feet	Zn%	Pb%	Ag oz/T
87-58	63.10 - 64.70	1.60	5.3'	13.53	2.80	0.07
87-59	31.25 - 33.50	2.25	7.4'	19.22	3.32	0.09
87-60	56.15 - 58.90	2.75	9.0'	10.16	1.71	0.05
87-61	37.70 - 37.80	0.10	0.4'	15.90	2.71	0.05
87-62	50.20 - 50.45	0.25	0.8'	5.34	0.71	0.04

The results to date have confirmed the continuity of the high grade zinc occurrence along 600 metres of strike length in the New Showing Zone.

These latter results indicate an average potential value of \$200-Cdn/ton at current metal prices. The Net Smelter Return could reasonably be expected to be in the range \$140-\$150/ton. Metallurgical tests are planned to confirm this estimate. The next phase of diamond drilling (14,000 feet) is expected to start in the first week of October.
