

LEGEND

- Stream gravels - Glacio-fluvial deposits
- Cowichan formation - Conglomerates, sandstones, shales
- Granodiorite, diorite, and related types

VANCOUVER GROUP

- Probably Sicker series - Tuffaceous sediments with some volcanic flows
- Sutton formation - Limestones, marbles
- Principally Vancouver volcanics - Andesitic flows, breccia, amygdaloid tuffs. Includes Sicker volcanics and, where not differentiated, Sicker sediments.

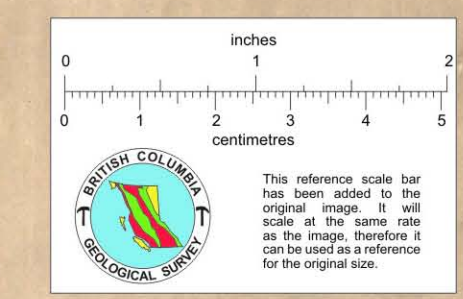

Geology after "Mining Training Project (1939) Mapping". Extensions and outlining of tuffaceous sediments from later reconnaissance mapping.

INDEX TO MANGANESE SHOWINGS

- Shaw creek
- Cottonwood creek (A)
- Cottonwood creek (B)
- Meade creek
- Wilson Brook
- West of Hill 60
- Hill 60 (A)
- Hill 60 group (B)

To accompany report by H. Sargent

Scale: 2 inches = 1 mile

Based on Forest Map of Esquimalt and Nanaimo Railway Land Grant - 1937.
