

AFTON
 April 1983
 status

009813

14000 N

*Question
pyrite*

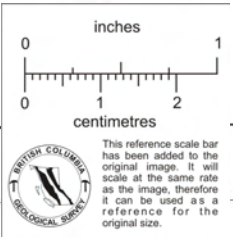

13000 N

12000 N - but best

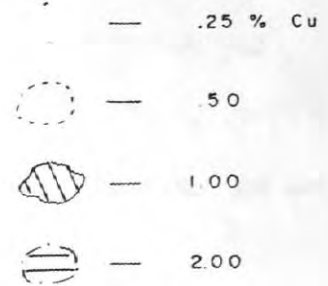

*Au follows Hanging wall
(as does Bornite)*

*Hg + As highs also
tend to be w. the high Cu's but
not really good correlates - do not correlate
with Au & Ag*

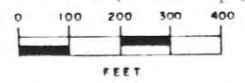

**COPPER GRADE
CONTOURS**

CORPORATION
1950 BENCH**

APRIL 1983

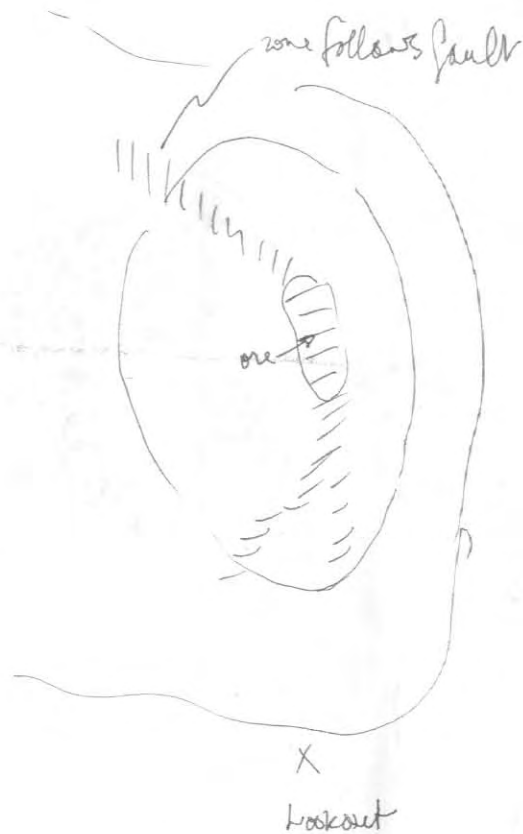

7500 E

8500 E

9500 E

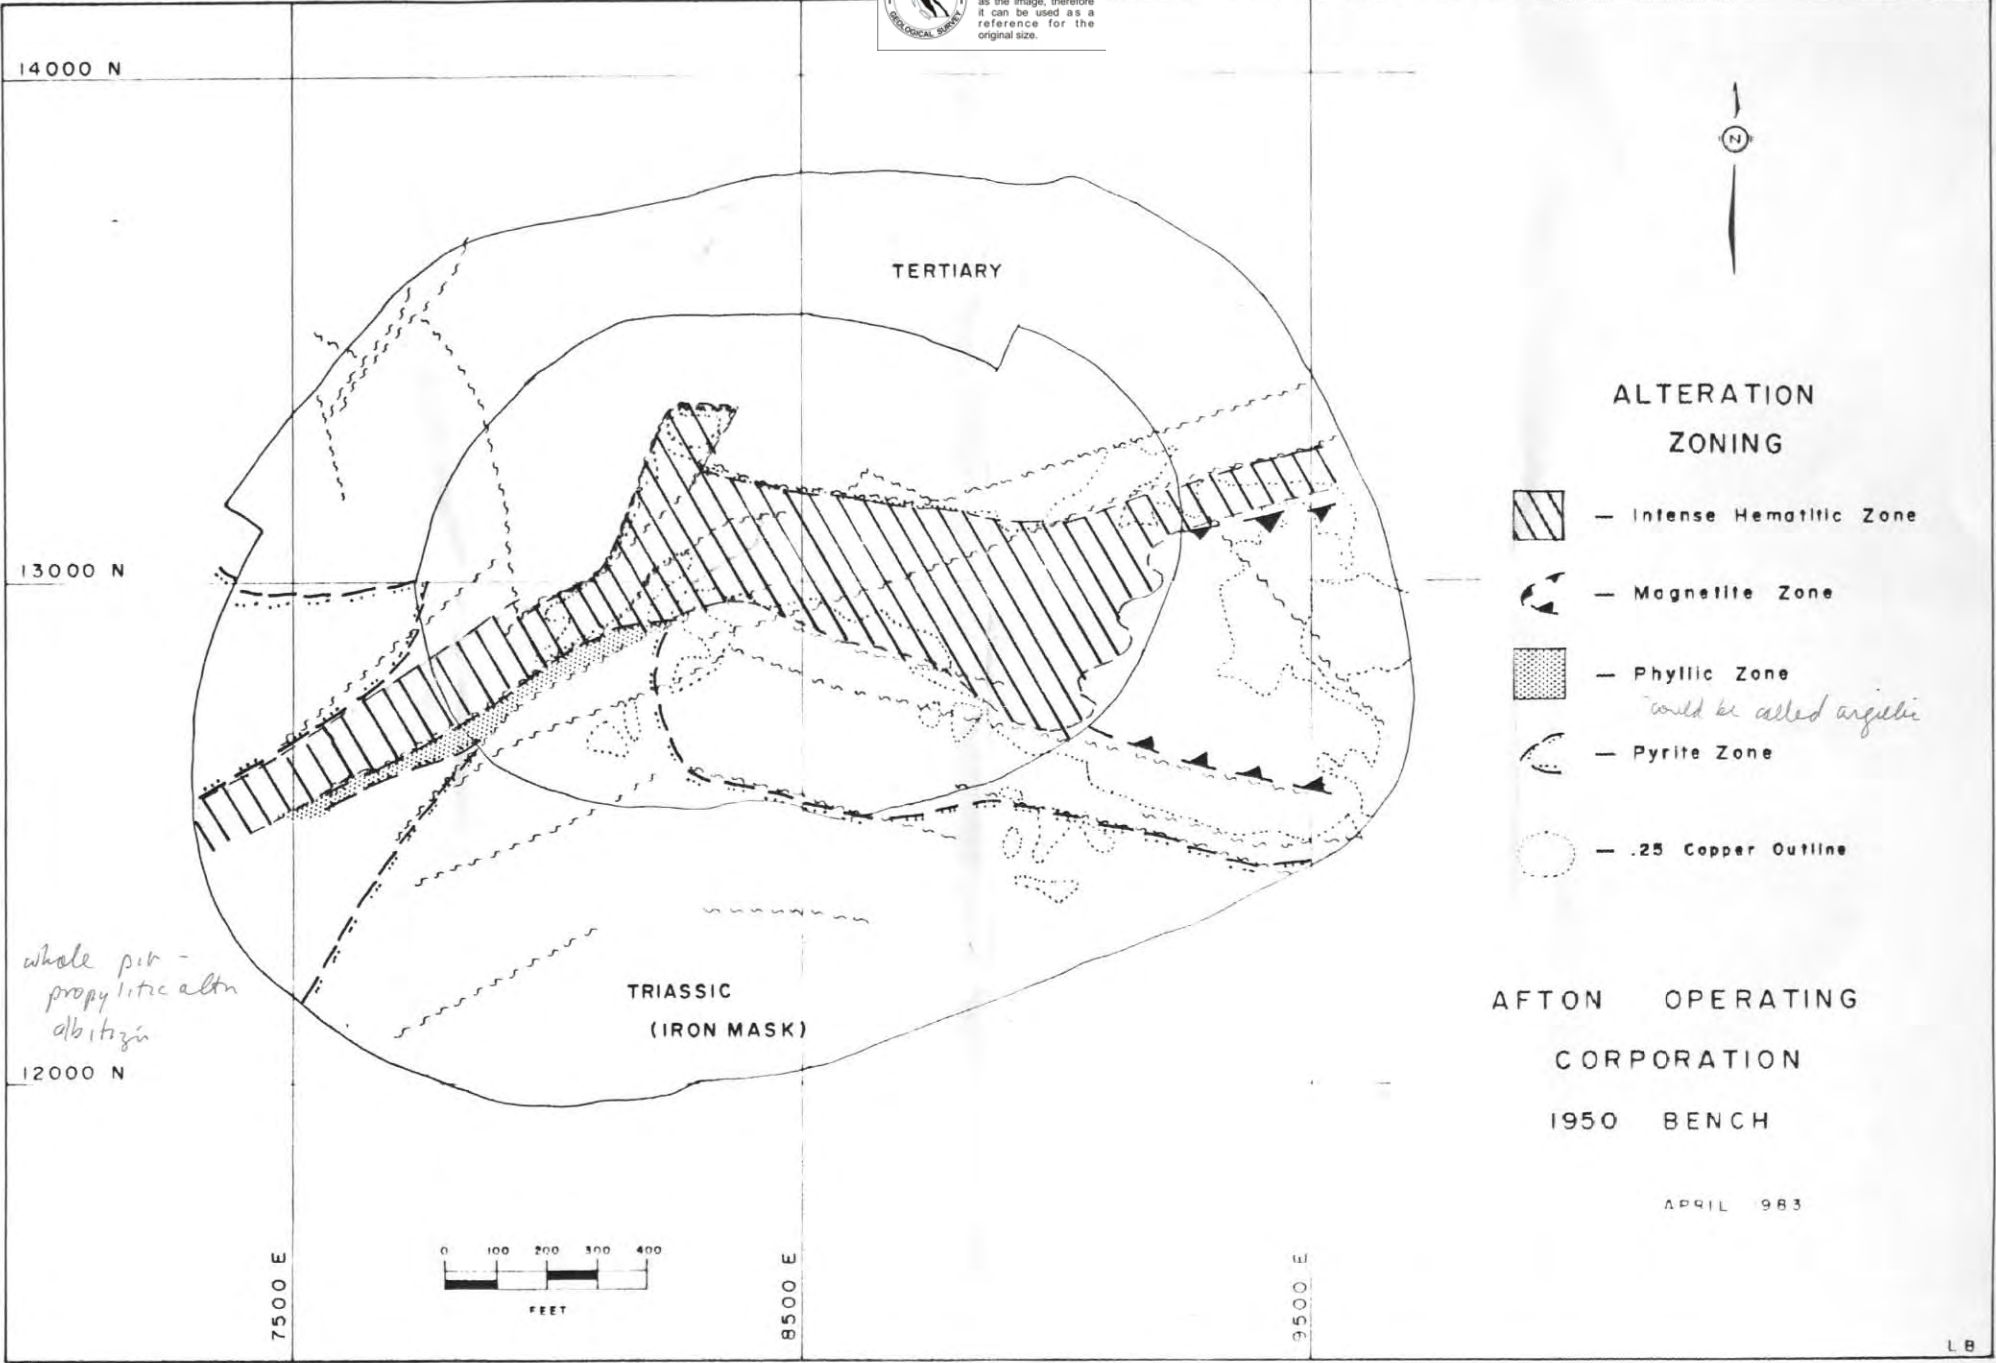

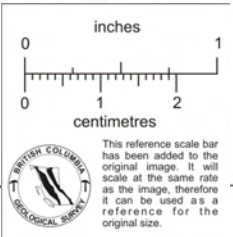

8000 TPD ore / 9000 if soft enough

Haul cycle now 32 minutes

perhaps 360 more
feet to go (at
least 300)

5:1 now
2:1 85
1:1 86 } overall $\frac{1}{2}$ / 1 for rest of
ore

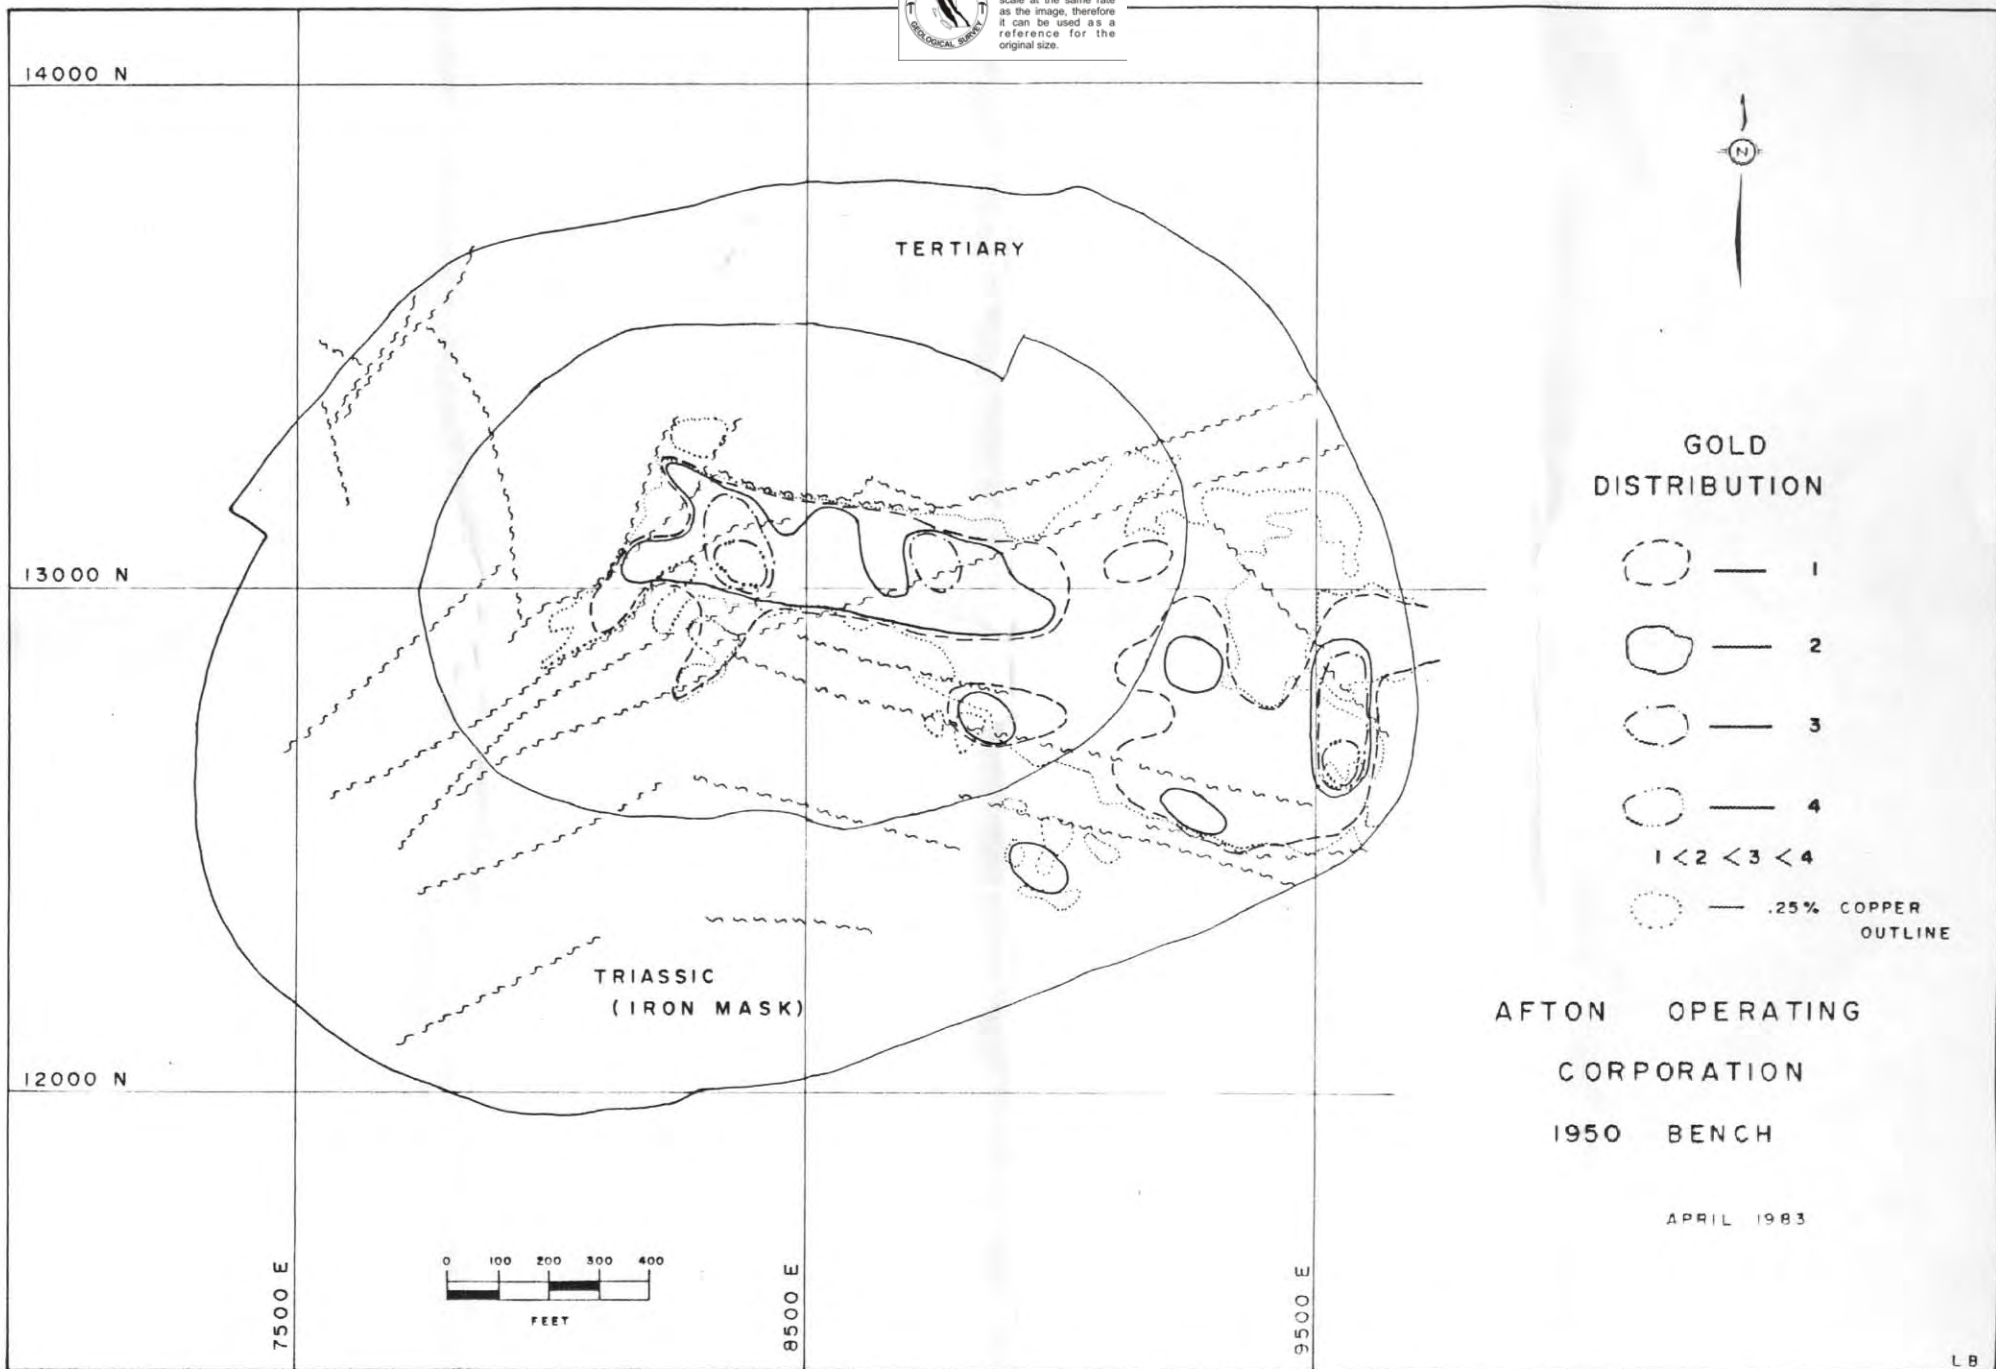

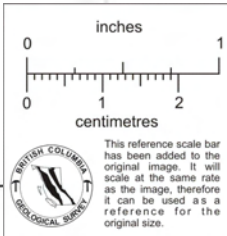

ALTERATION ZONING

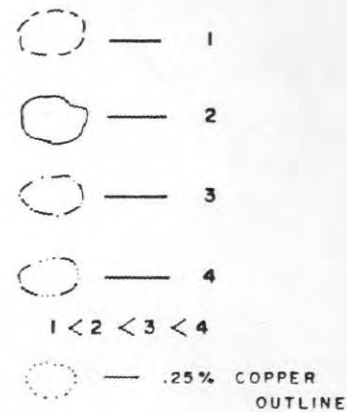

-  — Intense Hematitic Zone
-  — Magnetite Zone
-  — Phyllic Zone
could be called argillite
-  — Pyrite Zone
-  — .25 Copper Outline
