Memo to ASB

re Fish Lake Deposit visited
Mar 10 to 13, 1981

I spent several days on the property to discuss the geological and alteration histories, ^{controls of} mineralization, and to look at some of the new core.

Another visit ~~is~~ will be needed next summer to ~~finish~~ complete the core study.

Several samples ~~were~~ ^{were taken to} have K/Ar analyses run for check purposes.

The new drilling ^{consisted of} ~~both~~ deepening existing holes ^(-60°N) and drilling new angle holes ^{to check} to a depth of 1000 feet the extent and tenor of the mineralization.

Presently, the last stages of the program are testing a Cu-Au ^(the Albert) ~~and~~ and an Au (the Renner) zone. Both are east of the main deposit. These programs are follow-ups of a percussion drill program.

Good communication was established
with Andre Pauwells and Norma Wilson,
the geologists running the program.

The new program has more or less confirmed
grade and tonnage figures quoted in CIM Special
Volume 15. WSMCM
